EDUCATION

University of Guelph — Guelph, Ontario
Bachelor of Computing (Co-op), Major in Computer Science — Sep 2025 - Apr 2030

SKILLS

Languages: C, Python, C++, HTML, CSS, JavaScript, SQL
Frameworks/Libraries: FastAPI, SQLAlchemy, OpenCV, YOLO
Developer Tools: Git, GitHub, Linux, VS Code, JetBrains, pytest, REST APIs

TECHNICAL EXPERIENCE

Software Developer Intern — Aug 2024 to Jan 2025
InnovaTech Solutions | Mississauga, Ontario

- Developed automated **SEO** workflows spanning three stages: keyword collection, campaign tracking, and report generation, reducing repetitive manual work.
- Built an in-house **CRM** with four core functions: lead intake, status tracking, follow-up scheduling, and client notes, centralizing sales operations.
- Supported **Linux server** integration across three operational areas: application deployment, service configuration, and monitoring, while troubleshooting environment issues.
- Documented CRM workflows and server setup procedures, creating repeatable guidance for testing, deployment, and future system updates.

Project Luminosity
Executive Member | Digital Operations

- Built a structured content tracker with formulas, filters, status fields, and deadlines to coordinate career-exploration initiatives across the executive team.
- Created digital intake and feedback forms, organized response data, and analyzed engagement trends to guide future resource topics and programming.
- Produced a lightweight reporting dashboard that summarized form responses, tracked topic demand, and surfaced planning priorities for the executive team.

Tawazun
Executive Member | Digital Resources

- Organized mental-health resources into a searchable digital directory with standardized categories, descriptions, and review fields for easier maintenance.
- Developed reusable content templates and an automated response-tracking workflow to support accessible, consistent awareness and outreach campaigns.
- Introduced validation and review checks to identify duplicate, outdated, or incomplete resource entries before publication.

PROJECTS

Sentinel | Python, FastAPI, SQLAlchemy, SQL — GitHub | Live Demo — Aug 2026

- Integrated VirusTotal, AbuseIPDB, URLhaus, and CISA into one workflow that normalizes results for five indicator types.
- Designed a weighted risk-scoring engine to classify threat levels using three indicators.
- Stored investigation history in a relational database with **SQLAlchemy**, enabling repeatable analysis across supported indicators.
- Built **REST APIs** with **FastAPI** and improved reliability through validation, caching, rate-limit handling, API error recovery, and automated **pytest** coverage.

Computer Vision Security Monitoring System | Python, OpenCV, YOLO — GitHub — Oct 2026

- Built a webcam security monitor using **OpenCV** motion analysis and **YOLO** object detection in a four-worker pipeline.
- Converted live detections into auditable 0-100 risk scores using custom detection zones, time-based rules, threat scoring, watched-object filters, and CSV/JSON event logging.
- Delivered a **FastAPI** dashboard with annotated MJPEG video, snapshot evidence, system controls, **SQLite** event history, and rate-limited Twilio SMS alerts.

The Pivot Labs Website | HTML, CSS, JavaScript — Live Site — 2026

- Designed the site structure and visual hierarchy directly in code, then implemented responsive layouts with **HTML** and **CSS** across four pages.
- Added reusable navigation and interactive behavior with **JavaScript**, refining spacing, typography, and content flow for desktop and mobile screens.

Personal Portfolio | HTML, CSS, JavaScript, Cloudflare — GitHub | Live Site — 2026

- Designed and built a responsive portfolio with semantic **HTML**, custom **CSS**, and **JavaScript** to present projects, skills, experience, and a cybersecurity focus.
- Implemented custom animations and accessible interactions, then automated deployment to a **Cloudflare**-hosted domain using **Git** and **GitHub**.
